

INTRODUCING  
THE  
NAIL  
ZONE

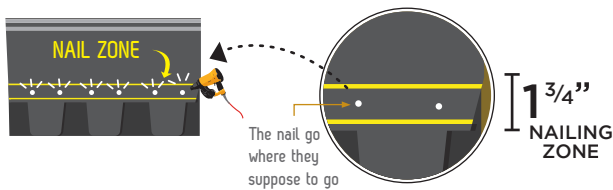

only from  
**Malarkey**  
Roofing Products®

The average house roof requires  
**7920 NAILS!**

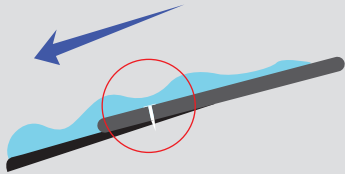

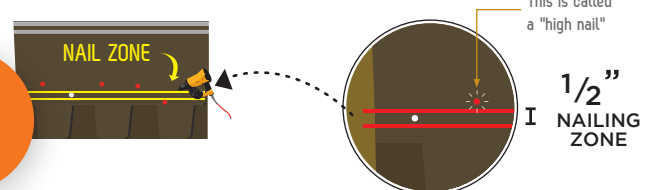

Think:  
**IS EVERY NAIL INSTALLED CORRECTLY?**

**MALARKEY ENGINEERED SHINGLE DESIGN**

**THE DIFFERENCES**

**STANDARD SHINGLE DESIGN**

Allows for faster water flow, by reducing dips caused by the nail. This also makes it easy to hit **BOTH** layers every time.

**TAPERED  
BACKING  
SHIM**

Standard laminate shingles when high nailed, create a trough, where water flow is restricted. This causes shingles to wear out faster!

- ✓ Faster Installation
- ✓ More accurate
- ✓ More Waterproof

**INSTALLATION**

- ✗ Slower to install
- ✗ Increased chances of "high nails"
- ✗ Decreased Shingle Life

**DOUBLE RAIN SEAL**

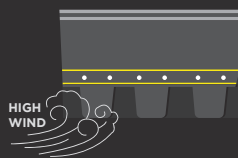

2 Layers of Sticky Waterproof tar seal strips seal in all nail holes!

**DOUBLE  
RAIN SEAL  
PROTECTION**

Nail must be driven through sticky tar seal or leaks can form.

**SINGLE RAIN SEAL**

Increased wind resistance.

**THE RESULT**

If not installed correctly, shingles could flap in the wind, stretching, creating loose nail holes, and eventually blowing off the roof.

Malarkey laminate shingles are manufactured with The Zone® patented nailing area, which is over **three times larger than other laminate shingles** and dramatically improves correct fastener placement.
